Section 2: Digital Filters A filter is a device which passes some signals 'more' than others (selectivity), e.g. a sinewave of one frequency more than one at another frequency. We will deal with linear time-invariant (LTI) digital filters.

DIGITAL FILTERS 6.2 Figure 6.1 However, it is possible to replace a general purpose DSP chip and design special hardware digital filters which will operate at video-speed sampling rates.

SECTION 6 DIGITAL FILTERS - analog.com

Digital filters are used for two general purposes: (1) separation of signals that have been combined, and (2) restoration of signals that have been distorted in some way. Analog (electronic) filters can be used for these same tasks; however, digital filters can achieve far superior results. The most popular digital filters are described and compared in the next seven chapters. This ...
