

dynamics and vibration of pdf

The last several lectures deal with mechanical vibration. Up to now in the course considerable emphasis has been placed on finding equations of motion of mechanical systems. The study of vibration will emphasize the analysis of the solution of the equations of motion of a particularly important class of dynamics problems: the vibration of machines.

It covers Dynamics and Vibration modules that are taught at different undergraduate levels to the engineering students at Universities in the UK and worldwide. In addition to the theory sections and the tutorial sheets provided after each chapter, software called DAMA, "Dynamic Analysis for Mechanical Application"™, in which simulations of mechanisms and vibrating systems are implemented, is provided via a website.

A free vibration has no external energy added after it starts moving so it follows that all the forces and all the moment of force acting on the body must add up to zero. This is the basis of the analysis.
