Orbital elements are the parameters required to uniquely identify a specific orbit. In celestial mechanics these elements are generally considered in classical two-body systems, where a Kepler orbit is used.

A chemical element is a species of atoms having the same number of protons in their atomic nuclei (that is, the same atomic number, or  $Z$ ). For example, the atomic number of oxygen is 8, so the element oxygen consists of all atoms which have exactly 8 protons.

I bought this book seeking theory that would better my understanding of basic plane geometry, as a stepping stone to more advanced geometry. I had the usual high school level of understanding and view of plane geometry as boring, useless theory that left me with many loose ends.
